CERTITUDES

- GRP Industries follows a longstanding commitment to quality.
- They follow a strict quality control policy that adheres to the Quality Assurance ISO 9001: 2008 standard.
- Their raw materials and products are tested by our Quality Control department in our testing laboratory for conformance to requirements and specifications.

BEACON OF TOMORROW

- GRP Industries' client base defers across the product range.
- Their Polyester Enclosures and Polyspace Kiosks range cater to the electricity & water Industry; while their Roofing Systems and Polyshades for Instruments range cater to the construction industry.

The vision was to become a manufacturer specialising in the production of glass reinforced polyester enclosures and kiosks for application in the electrical industry.

Since then, GRP Industries has grown to become the largest manufacturer of polyester enclosures and kiosks in the Middle East. Its products are certified and utilised by the water and electricity governing bodies of several MENA countries, such as Saudi Arabia, Iraq and Egypt.

To cater to the growing needs of a rapidly industrialising and developing UAE, the company has diversified its product range into the construction sector, with a wide range of glass reinforced polyester roofing products. GRP Industries' specialised engineering team is capable of manufacturing customisable roofing products such as domes, corner flashings and soaker panels that can be installed in warehouses, malls and buildings.

GRP Industries has the infrastructure to manufacture by contact molding, injection molding and cold press molding methods. The company is quality-driven and is continuously engaged in investing in the latest technology of composites manufacturing.

The company believes in personalised sales and after-sales service, which have been the driving forces in understanding the requirements of clients. Teams of qualified engineers and experienced marketing personnel have ensured customer satisfaction and found more avenues for innovative products and tailor-made services.

MANUFACTORY

Through the expertise of our engineering design team and our polyester reinforcement technology, GRP Industries can manufacture technical fiberglass products that comply with international standards.

Their manufacturing facilities cover an area of 130,000 sq. ft. and are spread across three production units. These production units work cohesively at different stages of the

production cycle.

They have the infrastructure and capability to manufacture by contact molding, injection molding and cold press molding. The manufacturing is carried out in a dust free air-conditioned environment to ensure quality consistency. The high quality of the products is also credited to the in-house design and production of our molds.

Their engineering design team develops our molds by factoring in client specifications and technical functionality & reliability. Storage, maintenance and replacement of molds are carried out periodically to ensure the quality of their products. Their vast inventory of molds allows us to have a wide range of sizes for them products; which we are confident will meet any client requirements.

They follow a strict quality control policy that is implemented by the Quality Control department. Our quality control procedures adhere to the IMS (Integrated Management System) standard.

Not only are the products tested by independent testing centers, they test their products in-house for water proofing, tensile & flexural strength, hardness and weight. Quality is one of GRP Industries' USP and an attribute that their clients rely on.

POLYESTER ENCLOSURES

GRP Industries' polyester enclosures are designed and manufactured for outdoor application to protect electrical equipment and instruments from the climate conditions of high temperature and humidity that prevail in the Middle East. Contact molding and injection molding technology are utilized along with Grade "A" quality raw materials to build the suitable thickness to their laminate and add the required level of gelcoat protection.
