

he company was founded on a realisation that feels obvious yet radical in enterprise IT—people don't need more dashboards, alerts, or manual fixes. They need relief. They need systems that anticipate issues, act intelligently, and resolve problems without breaking momentum. eBlissAI was created to bring back digital harmony at a time when complexity has surpassed what humans alone can manage.

HUMAN-CENTRED INNOVATION

eBlissAI is human-centered by design. The platform removes friction, reduces cognitive load, and helps people do their best work—faster, smoother, and with fewer interruptions. Its goal is not just operational efficiency, but emotional ease.

Enterprise IT has outgrown human-scale operations. Hybrid work, security threats, device sprawl, and data overload have made reactive, slow, and delayed IT a structural failure—driving several hundred billion dollars in cost and lost productivity every year. eBlissAI replaces firefighting with proactive intelligence through a compounding engine that senses, reasons, learns, and adapts—so every fix makes the system smarter.

At a technology level, this intelligence is delivered through a continuously learning architecture combining predictive analytics, multi-agent reasoning, and autonomous self-healing. Instead of static rules, the system evolves in real time to identify root causes, personalise responses, and prevent repeat failures. “The world needs foresight, not more firefighting.”

GUIDED BY A VISIONARY

Founder and CEO Mr. Shirish Nimgaonkar leads eBlissAI with a deeply human conviction: people deserve clarity, not chaos; flow, not friction; elevation, not

eBlissAI

ELEVATING HUMAN POTENTIAL

eBlissAI is an AI-driven autonomous IT operations platform, headquartered in Massachusetts, built on a simple promise: technology should feel calm, supportive, and human. eBlissAI exists to elevate human experience and potential at work—restoring focus, flow, and confidence in a world overwhelmed by digital noise

exhaustion. That purpose shapes how eBlissAI is built and how it grows—pairing disciplined execution with strategic empathy to turn complexity into confidence, and technology into a quiet enabler of progress.

“Excellence earns trust. Empathy gives it purpose. Execution turns both into impact.”

EMPATHY-DRIVEN INTELLIGENCE

eBlissAI adapts to how people actually work. Developers need performance. Sales teams need reliability. Leaders need seamless responsiveness. The platform learns behavior patterns and real-time context to personalise experiences by role and environment—so work stays uninterrupted and intuitive.

EXPERTS BEHIND INNOVATION

eBlissAI is building the Autonomous IT Layer with multi-agent intelligence and an advanced architecture designed

for a world where complexity keeps accelerating. Strengthened by leaders from IIT, Stanford, Harvard, MIT, Google, Target, Intel, and Meta, the team blends deep domain expertise with disciplined execution to deliver impact at enterprise scale.

REAL IMPACT FOR BUSINESS

For enterprises with large IT footprints—across banking, manufacturing, healthcare, and retail—eBlissAI reduces human intervention, speeds resolution, and lowers total cost of ownership while improving employee experience.

All this results in a 15x–45x ROI through predictive fixes, reduced downtime, and reclaimed productivity—along with something harder to quantify: calm, confidence, and creative momentum.

“When technology restores calm, people rediscover confidence, creativity, and their best work.”
